BIBLIOGRAPHY OF AGRICULTURE

1080

Vol. 33

June 1969

No. 6

The Bibliography of Agriculture is an index to the literature of agriculture and the allied sciences received in the National Agricultural Library. Publications from any country are indexed, provided they are in one of the languages shown in CAPITALS at top of next column, or have summaries, abstracts, or translated titles in one of those languages.

Literature received more than one year after publication is generally not indexed. Exceptions are made for important scientific publications.

Indexing of articles on the processing of agricultural products is limited to those on primary processing.

Unsigned articles and those signed with pseudonyms or initials, editorials, letters to the editor, and columns appearing regularly, are omitted.

For more detailed coverage of the literature on pests and their control, please consult the Pesticides Documentation Bulletin, a biweekly publication of the National Agricultural Library.

FORMAT

The Bibliography is a classified arrangement of references under the following subjects:

USDA Publications

State Agricultural Experiment Station Publications

State Agricultural Extension Service Publications

Agricultural Economics and Rural Sociology

Agricultural Products

Animal Industry

Engineering

Entomology

Food and Human Nutrition

Forestry

Plant Science

Soils and Fertilizers

Miscellaneous

The classified section is followed by the listing of:

New Periodicals and Serials

Translations

Food and Agriculture Organization of the United Nations (FAO) Publications

The last section of each monthly issue, except November, is the Author and subject index for that issue.

For monographs the title is shown in the original language, followed by the English version. Titles of foreign language articles in serial publications are given in English only; the language of the text is shown in abbreviated form in parentheses at the end of the title. The following notations are used:

(Af)	Afrikaans	(Ic)	Icelandic
(Al)	Albanian	(In)	Indonesian
(Ara)	Arabic	(It)	ITALIAN
(Arm)	Armenian	(Ja)	JAPANESE
(Az)	Azerbaijani	(Ka)	Kazakh
(Be)	Belorussian	(Ko)	KOREAN
(Bu)	Bulgarian	(La)	Latvian
(Bur)	Burmese	(Li)	Lithuanian
(Ch)	CHINESE	(No)	Norwegian
(Cz)	CZECH	(Pe)	Persian
(Da)	Danish	(Pol)	POLISH
(Du)	DUTCH	(Por)	PORTUGUESE
(Es)	Estonian	(Rum)	Rumanian
(Fi)	Finnish	(Rus)	RUSSIAN
(Fl)	Flemish	(Se)	SERBO-CROATIAN
(Fr)	FRENCH	(Si)	Siamese
(Ge)	GERMAN	(Sl)	Slovenian
(Geo)	Georgian	(Sp)	SPANISH
(Gre)	GREEK	(Sw)	Swedish
(He)	Hebrew	(Ta)	Tadzhik
		(Tu)	TURKISH
(Hu)	HUNGARIAN	(Uk)	UKRAINIAN

Abbreviated names of the publications cited prior to July 1, 1964 are those from USDA Miscellaneous Publication 765—List of Serials Currently Received in the Library of the United States Department of Agriculture, July 1, 1957. Abbreviated names of all new periodical titles received after July 1, 1964, are taken from the American Standard for Periodical Title Abbreviations. As time allows, abbreviations set up for titles before that date will be converted to the new form.

The presence of the term "Ref." in the citation indicates that the article contains ten or more references to the literature.

Following each citation is the Library classification number which should be used when requesting loans or reproduction of articles.

FREQUENCY OF PUBLICATION

The Bibliography is published monthly. The December issue is devoted wholly to a subject index and the cumulated Personal and Organizational index to the preceding eleven issues.

AVAILABILITY OF REFERENCES CITED

Loans

Most of the material in the National Agricultural Library collection may be borrowed by employees of the Department of Agriculture and by other libraries. In requesting loans, please include the library call number found at the end of the citation. Loan of periodicals is restricted to the Washington, D. C. area. Foreign statistical publications and rare books are loaned only by special arrangement.

Free Distribution

U.S.D.A. publications. Domestic requests for publications of the United States Department of Agriculture will be filled free to libraries and other qualified agencies and organizations, as long as the supply lasts. (For ordering information, see Checklist of U.S.D.A. Publications in this issue.) Foreign institutions, organizations and agencies which issue publications may obtain U.S.D.A. publications in exchange by writing to the United States Department of Agriculture, National Agricultural Library, Exchange Unit, Washington, D. C., 20250.

State Agricultural Experiment Station and Extension Service publications. Publications issued by State Agricultural Experiment Stations and Extension Services are available except where noted, and as long as the supply lasts, from the issuing station or service. The National Agricultural Library does not distribute them; however, reproductions are available at regular Library rates.

Technical Reports

Most documents issued by CFSTI (Clearinghouse for Federal Scientific and Technical Information) are also sold by the Clearinghouse, U. S. Department of Commerce, Springfield, Virginia 22151 for \$3.00 per document.

Reproduction

All articles listed may be obtained in microfilm or photoprint form from the United States Department of Agriculture, National Agricultural Library, Photoduplication Section, Washington, D. C., 20250. Copying charges for each periodical or book are:

MICROFILMS: \$1.00 for each 30 pages or fraction copied from a single article or book.

PHOTOPRINTS: \$1.00 for each 4 pages or fraction copied from a single article or book.

RUSH SERVICE: Will be furnished upon payment of \$1.00 additional for each order.

Payment must accompany the order. Cash, Library coupons, check or money order drawn to the National Agricultural Library, U. S. D. A., are acceptable. Payment for orders originating outside of the United States should be made by international money order or draft on an American bank, or by UNESCO book coupons. Superintendent of Documents coupons and requests to furnish photocopy to be paid from Superintendent of Documents Deposit funds cannot be honored. Credit may be extended only to Government agencies and institutions. Billing address should be indicated.

Library Coupons

National Agricultural Library coupons, valued at \$1.00 each, may be purchased in any quantity.

PLEASE GIVE COMPLETE BIBLIOGRAPHIC INFORMATION AS IT APPEARS IN THIS PUBLICATION FOR EACH ITEM REQUESTED.

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C., 20402
\$26.50 per year, domestic; \$33.25 per year, foreign. Single copies vary in price.

Use of funds for printing this publication approved by the Director of the Bureau of the Budget (March 31, 1964)

CHECKLISTS

Checklists of publications of the U. S. D. A., State Agricultural Experiment Stations, and State Agricultural Extension Services are prepared for the convenience of those who wish to follow the literature from these sources. Most of these publications are included also in the classified section. All are indexed in the author and subject indexes.

Abstracts are included with citations of U. S. D. A. publications, provided they are brief and are received with the original publication.

U. S. D. A. PUBLICATIONS

Publications in the various United States Department of Agriculture series are listed first, followed by publications issued by the various agencies within the Department, arranged alphabetically by name of agency.

Domestic requests for publications in the various Department series will be filled free to libraries and other qualified agencies and organizations upon application to the United States Department of Agriculture, Office of Information, Washington, D.C., 20250, as long as the supply lasts. They may also be purchased from the Superintendent of Documents, Washington, D.C., 20250.

Domestic requests for most publications issued by the Department will be filled free by the issuing agency, as long as the supply lasts. Requests should be addressed to the United States Department of Agriculture, name of the specific issuing agency, Washington, D.C., 20250.

Foreign governments, institutions and agencies which issue publications, may obtain United States Department of Agriculture publications in exchange by writing to the United States Department of Agriculture, National Agricultural Library, Exchange Section, Beltsville, Md., 20705

For further information about the availability of United States Department of Agriculture publications, consult U.S.D.A. List Number 11, List of Available Publications of the United States Department of Agriculture, obtainable from the United States Department of Agriculture, Office of Information, Washington, D.C., 20250, and for sale by the Superintendent of Documents, Washington, D.C., 20402.

AGRICULTURAL RESEARCH SERVICE

34214 Wolfe, R. D., and Hatch, C. L.
DUTCH ELM DISEASE DETECTED IN MISSISSIPPI. Plant Dis. Rep. 53(1):3. Jan. 1969. 1.9 P69P
Caused by *Ceratocystis ulmi* on *Ulmus* spp.

34215 Sowell, G., and Harris, H. B.
DOWNY MILDEW OF SORGHUM IN GEORGIA. Plant Dis. Rep. 53(1):4. Jan. 1969. 1.9 P69P
Caused by *Sclerospora sorghi*.

34216 Cameron, H. R.
STEM PITTING OF ITALIAN PRUNE. Plant Dis. Rep. 53(1):4-6. Jan. 1969. 1.9 P69P
Causal organism unknown.

34217 Mircetich, S. M., and Fogle, H. W.
STEM PITTING IN PRUNUS SPP. OTHER THAN PEACH. Plant Dis. Rep. 53(1):7-11. Jan. 1969. 1.9 P69P

Stem pitting now has been observed in several *Prunus* spp. Symptoms are variable and differ according to species and stage of the disease. Those in peach, nectarine, and apricot have been described in earlier papers. Occurrence of the disease in European plum (*P. domestica*), Japanese plum (*P. salicina*), a plum hybrid (*P. cerasifera* var. *divaricata* x *P. spinosa*), Chinese wild peach (*P. davidiana*), duke cherry (*P. gondouini*), and St. Lucie cherry (*P. mahaleb*) is reported for the first time. Stem pitting in sour cherry (*P. cerasus*) is noted for the first time in the United States.

34218 Bell, D. K.
RELATIVE SUSCEPTIBILITY OF THREE PEANUT CULTIVARS TO FAT LEG (SEEDLING GROWTH ANOMALY) CAUSED BY SEED TREATMENT WITH AN ORGANIC MERCURY FUNGICIDE. Plant Dis. Rep. 53(1):13-14. Jan. 1969. 1.9 P69P

Seed of peanut cultivars Starr, Florigiant, and Early Runner representing commercial seed types Spanish, Virginia, and runner, respectively, were treated with 2% ethylmercury chloride (EMC, 2% Ceresan Red) in separate lots at rates of 3, 4, 5, 6, 7, and 8 oz per 100 lb of seed and planted in the field in replicates. Emergence of Florigiant and Early Runner was delayed at the higher rates of EMC. Fat leg, a phytotoxic reaction in germinating seed, occurred in all cultivars and at all rates but generally tended to increase with rate. Chlorosis and stunting of older plants, apparently a separate phytotoxic reaction, was evident in all cultivars at the higher rates. Early Runner sustained the greatest numbers of fat leg and chlorotic-stunted plants. The least amount of fat leg occurred in Starr; Florigiant was intermediate. No fat leg or chlorotic-stunted plants occurred in the controls. There was no significant difference across rates within cultivars in hypocotyl length and diameter and length of the main axis of apparently normal plants.

34219 Kumar, A. C., and D'Souza, G. I.
PATHOGENICITY OF HEMICRICONEMOIDES SPECIES TO COFFEE. Plant Dis. Rep. 53(1):15-16. Jan. 1969. 1.9 P69P

An unidentified species of *Hemicriconemoides* was found to be a potential parasite of coffee in south India. It induces stunting in stem height, root length, and root weight of robusta and arabica seedlings.

34220 Scott, D. H., and others.
RESISTANCE OF STRAWBERRY VARIETIES TO LEAF SCORCH DISEASE. Plant Dis. Rep. 53(1):16-18. Jan. 1969. 1.9 P69P

A. D. Draper, J. R. McGrew, and I. C. Haut, joint authors.

Relative susceptibility to leaf scorch (*Diplocarpon earliana*) is given for several modern strawberry cultivars under field conditions in Maryland. The most resistant cultivars were Allbritton, Fletcher, Earlibelle, Howard 17 (Premier), and Md-US 2915.

34221 Fisher, F. E.
CHEMICAL CONTROL OF SCAB ON CITRUS IN FLORIDA. Plant Dis. Rep. 53(1):19-22. Jan. 1969. 1.9 P69P

In a series of field trials on mature trees of lemon, Temple orange, and grapefruit, ferbam 1.5 lb/100 gal. controlled scab (*Elsinoe fawcettii*) effectively. In one test with grapefruit, ferbam plus TPTH 0.25 lb (as a 20% formulation) resulted in more effective control than ferbam. Helicopter applications of fungicides were not effective for scab control. Sprays were applied as delayed dormant or "pin-point" growth, and repeated during the bloom when approximately two-thirds of the petals had fallen.

34222 Ginns, J. H., and Driver, C. H.
[FOMES] ANNOSUS ROOT-ROT IN SLASH PINE [PINUS ELLIOTTII ELLIOTTII] PLANTATIONS FOUR YEARS AFTER THINNING AND STUMP TREATMENTS. Plant Dis. Rep. 53(1):23-25. Jan. 1969. 1.9 P69P

The absence of root-rot centers and infected trees indicated that urea treatment of stumps will prevent disease occurrence. Creosote ranked second of the six chemicals evaluated, but elsewhere has not prevented the disease. Other chemicals used, in decreasing order of effectiveness, were ammonium sulfamate, pentachlorophenol, tributyltin oxide in water, ammonium bifluoride, and tributyltin oxide in oil.

34223 Zaumeyer, W. J., and Wester, R. E.
THE RAPID DEVELOPMENT AND SPREAD OF
STRAIN B DOWNY MILDEW OF LIMA BEANS. Plant Dis.
Rep. 53(1):25-26. Jan. 1969. 1,9 P69P
Phytophthora phaseoli.

34224 Nelson, M. R., and McKittrick, R. T.
EPIDEMIOLOGY OF CUCUMBER MOSAIC
AND OTHER VIRUS DISEASES OF LETTUCE IN ARIZO-
NA. Plant Dis. Rep. 53(1):27-29. Ref. Jan. 1969.
1,9 P69P

Cucumber mosaic virus (CMV) was found in Arizona head lettuce. The disease was not widespread but confined to areas near cities and towns where ornamentals, which serve as virus reservoirs, are found. The symptoms of CMV in lettuce cannot be distinguished from those of lettuce mosaic (LMV).

Some lettuce plants showed symptoms suggestive of spotted wilt virus; numerous transmission attempts failed to prove its presence.

Heavy infections of lettuce by LMV, despite the use of mosaic-tested seed, were found. Ornamentals possibly serve as sources of this infection based upon distribution of LMV in fields planted with mosaic-tested seed.

34225 Desjardins, P. R.
ALFALFA MOSAIC VIRUS-INDUCED LESIONS
ON BEAN; EFFECT OF LIGHT AND TEMPERATURE.
Plant Dis. Rep. 53(1):30-33. Ref. Jan. 1969. 1,9 P69P

Studies were made of the character of local lesions produced by the potato calico strain of alfalfa mosaic virus on bean leaves under different conditions of light and darkness and at three different temperatures. Postinoculation dark treatment affected the size, the amount of necrosis, and the extent of pigmentation of the lesion. Postinoculation light treatment generally resulted in smaller and more highly pigmented lesions. Temperature studies were based on average maximum daily temperature and were not carried out under controlled temperature conditions. The results indicated that temperature mainly affects the size of the lesion.

34226 Johnson, D. E., and others.
MULTIPLE APPLICATIONS OF 1,2-DIBROMO-3-CHLOROPROPANE FOR CONTROL OF NEMATODES
IN ESTABLISHED ROSE PLANTINGS. Plant Dis. Rep. 53(1):34-37. Jan. 1969. 1,9 P69P

B. Lear, S. T. Miyagawa, and R. H. Sciaroni, joint authors.
The experiments described show that multiple applications of 1,2-dibromo-3-chloropropane (DBCP) reduce the numbers of *Xiphinema americanum* and *Meloidogyne hapla* in the soil around the roots of greenhouse roses. An increased production of cut roses was associated with the reduced nematode population.

34227 Sen, A. K., and Jensen, H. J.
HOST-PARASITE RELATIONSHIPS OF VARIOUS PLANTS AND THE HOP CYST NEMATODE, *HETERODERA HUMULI*. Plant Dis. Rep. 53(1):37-40. Ref. Jan. 1969. 1,9 P69P

Thirty species of plants were tested to determine their susceptibility to *Heterodera humuli*. The host range of this nematode is predominantly in Urticaceae but it also will infect some plants in Cruciferae (mustard), Cucurbitaceae (cucumber), Leguminosae (bean, clover, pea and vetch) and Moraceae (hemp). New host plants reported here are bush bean, white clover, Boston pickling cucumber, black mustard, Perfection pea and hairy vetch.

34228 Zawadzka, B., Millikan, D. F., and Cochran, L. C.
INFLUENCE OF THE PROLIFERATION VIRUS
UPON THE QUALITY AND QUANTITY OF APPLE
FRUITS. Plant Dis. Rep. 53(1):41-43. Jan. 1969. 1,9 P69P

The proliferation virus reduces the yield and quality of fruit on infected apple trees. This reduction is expressed in lower numbers and smaller size of fruit. Overall reduction varied from about 85% in McIntosh to 27% for the more tolerant Beauty of Boskoop. The reduction in the extra grade ranged from 95% for McIntosh to 31% for Red Delicious.

REDUCTION IN MORTALITY OF PEACH
TREES FOLLOWING PREPLANT SOIL FUMIGATION.
Plant Dis. Rep. 53(1):49-53. Ref. Jan. 1969. 1,9 P69P

Preplant soil fumigation in a peach orchard where the original planting was heavily infected with *Clitocybe root rot* resulted in significantly better tree growth for 3 years. Reduction in populations of several types of parasitic nematodes (*Pratylenchus* sp., *Xiphinema* sp., and *Criconeoides* sp.) was observed for 1 or 2 years following soil treatment with 1,2-dibromo-3-chloropropane (DBCP), carbon disulfide, and tetrahydro-2H-3,5-dimethyl-1,3,5-thiadiazine-2-thione (DMTT). Tree losses during the first 3 years were 20% following carbon disulfide or DMTT. Tree losses of 53.3% following

DBCP were nearly as severe as the 66.7% in the check treatment. The reduction in tree deaths following fungicides but not following a nematocide suggests that control of a fungus pathogen was involved. The abundance of *Clitocybe tabescens* in roots of dying trees, both original and replanted, indicates that this was the pathogen controlled by the fungicides used.

34232 Brennan, E., and Leone, I. A.
AIR POLLUTION DAMAGE TO CHRYSANTHEMUM
FOLIAGE. Plant Dis. Rep. 53(1):54-55. Jan. 1969. 1,9 P69P

Chrysanthemum, one of the most popular florist crops in the United States, has shown symptoms of air pollution injury a number of times in the past few years in New Jersey greenhouses. Surveys made of chrysanthemum in several greenhouses indicated that there were varietal differences in susceptibility and that cultural conditions resulting in rapid vegetative growth were conducive to plant injury. The nature of the symptoms and the spectrum of plants injured suggested peroxyacetyl nitrate (PAN) as the responsible pollutant in these cases.

34233 Ruppel, E. G.
DISEASES OF SUGARBEEF IN ARIZONA.
Plant Dis. Rep. 53(1):56-58. Jan. 1969. 1,9 P69P

Between 1965 and 1968, beet western yellows, beet yellows, curly top, beet mosaic, cucumber mosaic, yellow vein, and rosette virus diseases were observed in sugarcane in Arizona. Yellows (western and beet) and curly top were in highest incidence and are most important in the State. Other virus diseases occurred in trace amounts. The virus diseases predominate in the arid regions of central Arizona.

Root rots (*Rhizoctonia*, *Pythium*, and *Sclerotium*), leaf spot (*Cercospora*), and root-knot nematodes are serious threats to beet production in the higher, cooler, elevations of the State. Ramularia and Phoma leaf spots

also were present but are considered unimportant at present.

Rust (*Uromyces*) occurred under certain environmental conditions in central Arizona, but the disease was usually suppressed by high temperatures and was of little economic importance.

Lesion and stunt nematodes were associated with a wilt of beet in central Arizona, but their causal relationship could not be established definitely. Symptoms of the disease consisted of an incipient wilt of the foliage, whereas the roots were flaccid and almost devoid of secondary and lateral roots.

34234 Daniels, N. E., and Toler, R. W.
TRANSMISSION OF MAIZE DWARF MOSAIC
BY THE GREENBUG, *SCHIZAPHIS GRAMINUM*. Plant Dis. Rep. 53(1):59-61. Jan. 1969. 1,9 P69P

Efficient transmission of the Johnson grass strain of sugarcane mosaic virus (SMV-Jg), the causal agent of the maize dwarf mosaic disease (MDM), by the greenbug (*Schizaphis graminum* (Rond.)) is reported. Transmission was achieved from sorghum to sorghum. Virus transmission was obtained when the aphids were allowed acquisition observations of probes of 1 and 3 minutes and acquisition feeding for 24 hours on the virus-infected leaf material.

Josephson, L. M., and others.
34235 GRAIN YIELD OF CORN REDUCED BY MAIZE
DWARF MOSAIC VIRUS INFECTION. Plant Dis. Rep. 53
(1):61-63. Jan. 1969. 1.9 P69P
J. W. Hilty, J. M. Arnold, H. C. Kincer, and
J. R. Overton, joint authors.

In 1967, individual plants in three hybrids
growing in three locations in Tennessee were rated for
degree of virus infection and ear corn weights obtained.
Yields decreased as the degree of infection increased.
Plants with ratings of 6 or higher produced small ears of
corn. Mean differences in weight of ear corn between
plants of different virus ratings were all highly signifi-
cant. The linear regression of yield on rating was signifi-
cant for DeKalb 805A and Funk G-4831W, with an average
decrease of 44 and 86 grams per plant for each unit in-
crease in rating, respectively. Plants with only mosaic
symptoms in the top leaves were reduced in yield as
much as 32%, indicating the need for hybrids with com-
plete resistance when grown under conditions of high
virus incidence.

BACTERIAL TOP AND STALK ROT DISEASE
OF CORN IN WISCONSIN. Plant Dis. Rep. 53(1):66-70.
Ref. Jan. 1969. 1.9 P69P

Sequence of symptoms and disease develop-
ment of a bacterial top and stalk rot disease of corn,
observed after overhead irrigation, are described. Isolates
from Wisconsin have been compared with isolates of a
bacterium causing a similar disease in North Carolina
and also in Egypt. The cultures from the three geographic
areas were similar in key cultural and physiological
characters, as well as in pathogenic effects following
stalk inoculations of corn plants. In physiological studies
corn stalk rot isolates from Wisconsin, North Carolina,
and Egypt differed in a number of characteristics from
Erwinia carotovora. Isolates of *E. carotovora* tested
were nonpathogenic to corn. Corn stalk rot isolates were
more similar in key physiological characteristics to *E.*
chrysanthemi than to *E. carotovora*, although cultures of
E. chrysanthemi tested were also nonpathogenic to corn.

34238 Shanmugasundaram, S., and others.
CUCURBIT VIRUS STUDIES IN HAWAII. Plant
Dis. Rep. 53(1):70-74. Ref. Jan. 1969. 1.9 P69P
M. Ishii, J. C. Gilbert, and H. Nagai, joint
authors.

Strains of watermelon mosaic virus were iden-
tified by symptoms on differential hosts. Field samples
from the islands of Oahu, Kauai, and Hawaii included
WMV-1, WMV-2 and a third, apparently distinct strain of
WMV on Kauai as well as cucumber mosaic virus. Infected
host plants collected from these islands included cu-
cumber, squash, *Momordica charantia* var. *pavel* (a cu-
cubit weed), and *Commelina diffusa*. Some field samples
tested appeared to be infected with more than one of these
viruses. Strain analysis of cucumber mosaic virus was

not attempted in this study. CMV is of secondary impor-
tance in Hawaii to WMV as a production problem of cu-
curbits.

Resistance to single infections of WMV-1,
WMV-2, CMV and to a mixture of CMV and WMV-1 was
found to occur in the cucumber breeding line Hawaii 64-
A-15. More severe initial symptoms on this line were
produced by the WMV strain found on Kauai and the com-
bination of WMV-2 with either WMV-1 or CMV.

The commercial cucumber cultivar Burpee Hy-
brid was found to be susceptible to all the WMV isolates
either alone or in mixtures.

WMV-1 and WMV-2 were recovered from
Momordica on Oahu. CMV was recovered from *Comme-
lina* on Hawaii.

34241 ALTERNARIA SEED INFECTION OF WHEAT.
Plant Dis. Rep. 53(1):77-80. Ref. Jan. 1969. 1.9 P69P

The incidence of black point disease of wheat
grains varies from 0.16 to 22.0 (average 2.3) percent.
Rainfall during the later stage of seed maturation favors
maximum infection (13 to 22%). *Alternaria tenuis* was the
principal pathogen (92%) involved, but isolations from
diseased grains yielded *A. triticina* (2%), *A. tenuis* in
association with *A. triticina* (3%), *Helminthosporium* sp.
(1%), *H. sorokinianum* (1%) and *Stemphylium* sp. (1%).
Fungal mycelium from the outer surface penetrated the
epidermal cells to cause seed infection. The dark brown
pericarp tissues of the base and embryo region contained
more abundant internal mycelium than did the beard re-
gion. No difference was found between *A. tenuis* and *A.*
triticina in the nature and extent of seed infection; both
formed dense mycelial mats between the inner surface
of the epidermis and cross layer cells, but the embryo
and the starchy region of the endosperm were neither
invaded nor discolored, and no inhibitory substance could
be detected to account for the absence of fungal mycel-
ium.

CONTROL OF BACTERIAL SPOT OF PEACH
IN NEW JERSEY. Plant Dis. Rep. 53(1):81-83. Jan. 1969.
1.9 P69P

Caused by *Xanthomonas pruni*.
Bacterial spot on peaches was the most destruc-
tive in memory in New Jersey during the 1968 grow-
ing season. Under these severe conditions, Terramycin
failed in commercial tests to control the disease; how-
ever, it was very effective in the control of bacterial spot
in an experimental block where it was applied to run-off
on a 7- to 10-day schedule, which was shortened following
heavy rains. The fungicide or insecticides used with Ter-
ramycin modified its effectiveness. All standard fungi-
cides failed in the control of bacterial spot.

34257 DEPTH, WEIGHT, AND WATER STORAGE OF
THE FOREST FLOOR IN WHITE PINE [*Pinus strobus*]
STANDS IN MASSACHUSETTS. U. S. Forest Serv. Res.
Paper NE-109,35 p.,map. Ref. 1968. A99.9 F7622Un
Depths and weights of the forest floor in 65
white pine stands in Massachusetts are given by total ac-
cumulations and by layers. Differences in accumulation by
geographic provinces and by soil parent materials are
considered. Simple and multiple correlation and regres-
sion of forest floor and organic matter accumulations on
age, basal area, site index, elevation, and soil drainage
class are presented. Moisture storage and daily drying
rates are evaluated for their possible effects on flood
control.

ENTOMOLOGY

Contains references chiefly on general entomology, and taxonomic and geographic entomology. Some references on pests of crops and products are included in the Bibliography, but for more detailed coverage of the literature on pests and their control, consult the Pesticides Documentation Bulletin, a biweekly publication of the National Agricultural Library.

BIBLIOGRAPHY OF AGRICULTURE

Vol. 33

July 1969

No. 7

The Bibliography of Agriculture is an index to the literature of agriculture and the allied sciences received in the National Agricultural Library. Publications from any country are indexed, provided they are in one of the languages shown in CAPITALS at top of next column, or have summaries, abstracts, or translated titles in one of those languages.

Literature received more than one year after publication is generally not indexed. Exceptions are made for important scientific publications.

Indexing of articles on the processing of agricultural products is limited to those on primary processing.

Unsigned articles and those signed with pseudonyms or initials, editorials, letters to the editor, and columns appearing regularly, are omitted.

For more detailed coverage of the literature on pests and their control, please consult the Pesticides Documentation Bulletin, a biweekly publication of the National Agricultural Library.

FORMAT

The Bibliography is a classified arrangement of references under the following subjects:

USDA Publications

State Agricultural Experiment Station Publications

State Agricultural Extension Service Publications

Agricultural Economics and Rural Sociology

Agricultural Products

Animal Industry

Engineering

Entomology

Food and Human Nutrition

Forestry

Plant Science

Soils and Fertilizers

Miscellaneous

The classified section is followed by the listing of:

New Periodicals and Serials

Translations

Food and Agriculture Organization of the United Nations (FAO) Publications

The last section of each monthly issue, except November, is the Author and subject index for that issue.

For monographs the title is shown in the original language, followed by the English version. Titles of foreign language articles in serial publications are given in English only; the language of the text is shown in abbreviated form in parentheses at the end of the title. The following notations are used:

(Af)	Afrikaans	(Ic)	Icelandic
(Al)	Albanian	(In)	Indonesian
(Ara)	Arabic	(It)	ITALIAN
(Arm)	Armenian	(Ja)	JAPANESE
(Az)	Azerbaijani	(Ka)	Kazakh
(Be)	Belorussian	(Ko)	KOREAN
(Bu)	Bulgarian	(La)	Latvian
(Bur)	Burmese	(Li)	Lithuanian
(Ch)	CHINESE	(No)	Norwegian
(Cz)	CZECH	(Pe)	Persian
(Da)	Danish	(Pol)	POLISH
(Du)	DUTCH	(Por)	PORTUGUESE
(Es)	Estonian	(Rum)	Rumanian
(Fi)	Finnish	(Rus)	RUSSIAN
(Fl)	Flemish	(Se)	SERBO-CROATIAN
(Fr)	FRENCH	(Si)	Siamese
(Ge)	GERMAN	(Sl)	Slovenian
(Geo)	Georgian	(Sp)	SPANISH
(Gre)	GREEK	(Sw)	Swedish
(He)	Hebrew	(Ta)	Tadzhik
		(Tu)	TURKISH
(Hu)	HUNGARIAN	(Uk)	UKRAINIAN

Abbreviated names of the publications cited prior to July 1, 1964 are those from USDA Miscellaneous Publication 765—List of Serials Currently Received in the Library of the United States Department of Agriculture, July 1, 1957. Abbreviated names of all new periodical titles received after July 1, 1964, are taken from the American Standard for Periodical Title Abbreviations. As time allows, abbreviations set up for titles before that date will be converted to the new form.

The presence of the term "Ref." in the citation indicates that the article contains ten or more references to the literature.

Following each citation is the Library classification number which should be used when requesting loans or reproduction of articles.

FREQUENCY OF PUBLICATION

The Bibliography is published monthly. The December issue is devoted wholly to a subject index and the cumulated Personal and Organizational Index to the preceding eleven issues.

AVAILABILITY OF REFERENCES CITED

Loans

Most of the material in the National Agricultural Library collection may be borrowed by employees of the Department of Agriculture and by other libraries. In requesting loans, please include the library call number found at the end of the citation. Loan of periodicals is restricted to the Washington, D. C. area. Foreign statistical publications and rare books are loaned only by special arrangement.

Free Distribution

U.S.D.A. publications. Domestic requests for publications of the United States Department of Agriculture will be filled free to libraries and other qualified agencies and organizations, as long as the supply lasts. (For ordering information, see Checklist of U.S.D.A. Publications in this issue.) Foreign institutions, organizations and agencies which issue publications may obtain U.S.D.A. publications in exchange by writing to the United States Department of Agriculture, National Agricultural Library, Exchange Unit, Washington, D. C., 20250.

State Agricultural Experiment Station and Extension Service publications. Publications issued by State Agricultural Experiment Stations and Extension Services are available except where noted, and as long as the supply lasts, from the issuing station or service. The National Agricultural Library does not distribute them; however, reproductions are available at regular Library rates.

Technical Reports

Most documents issued by CFSTI (Clearinghouse for Federal Scientific and Technical Information) are also sold by the Clearinghouse, U. S. Department of Commerce, Springfield, Virginia 22151 for \$3.00 per document.

Reproduction

All articles listed may be obtained in microfilm or photoprint form from the United States Department of Agriculture, National Agricultural Library, Photoduplication Section, Washington, D. C., 20250. Copying charges for each periodical or book are:

MICROFILMS: \$1.00 for each 30 pages or fraction copied from a single article or book.

PHOTOPRINTS: \$1.00 for each 4 pages or fraction copied from a single article or book.

RUSH SERVICE: Will be furnished upon payment of \$1.00 additional for each order.

Payment must accompany the order. Cash, Library coupons, check or money order drawn to the National Agricultural Library, U. S. D. A., are acceptable. Payment for orders originating outside of the United States should be made by international money order or draft on an American bank, or by UNESCO book coupons. Superintendent of Documents coupons and requests to furnish photocopy to be paid from Superintendent of Documents Deposit funds cannot be honored. Credit may be extended only to Government agencies and institutions. Billing address should be indicated.

Library Coupons

National Agricultural Library coupons, valued at \$1.00 each, may be purchased in any quantity.

PLEASE GIVE COMPLETE BIBLIOGRAPHIC INFORMATION (INCLUDING CALL NUMBER)
AS IT APPEARS IN THIS PUBLICATION FOR EACH ITEM REQUESTED.

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C., 20402
\$26.50 per year, domestic; \$33.25 per year, foreign. Single copies vary in price.

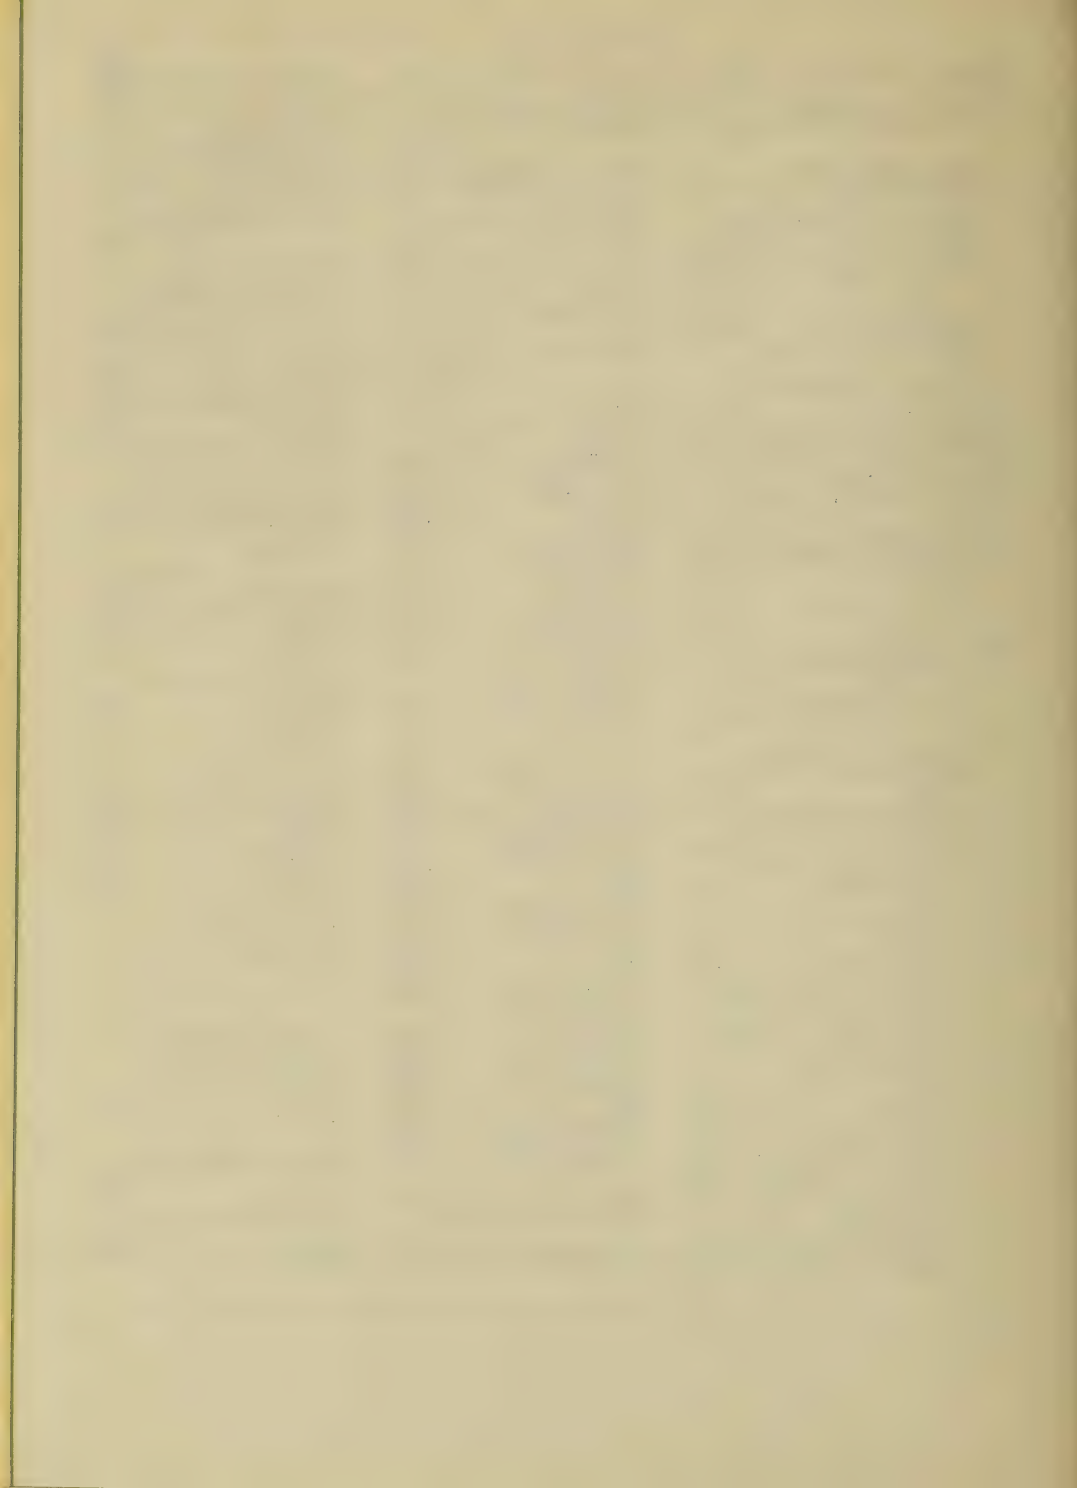

Use of funds for printing this publication approved by the Director of the Bureau of the Budget (March 31, 1964)

Checklists of publications of the U. S. D. A., State Agricultural Experiment Stations, and State Agricultural Extension Services are prepared for the convenience of those who wish to follow the literature from these sources. Most of these publications are included also in the classified section. All are indexed in the author and subject indexes.

Abstracts are included with citations of U. S. D. A. publications, provided they are brief and are received with the original publication.

U. S. D. A. PUBLICATIONS

Publications in the various United States Department of Agriculture series are listed first, followed by publications issued by the various agencies within the Department, arranged alphabetically by name of agency.

Domestic requests for publications in the various Department series will be filled free to libraries and other qualified agencies and organizations upon application to the United States Department of Agriculture, Office of Information, Washington, D.C., 20250, as long as the supply lasts. They may also be purchased from the Superintendent of Documents, Washington, D.C., 20250.

Domestic requests for most publications issued by the Department will be filled free by the issuing agency, as long as the supply lasts. Requests should be addressed to the United States Department of Agriculture, name of the specific issuing agency, Washington, D.C., 20250.

Foreign governments, institutions and agencies which issue publications, may obtain United States Department of Agriculture publications in exchange by writing to the United States Department of Agriculture, National Agricultural Library, Exchange Section, Beltsville, Md. 20705.

For further information about the availability of United States Department of Agriculture publications, consult U.S.D.A. List Number 11, List of Available Publications of the United States Department of Agriculture, obtainable from the United States Department of Agriculture, Office of Information, Washington, D.C., 20250, and for sale by the Superintendent of Documents, Washington, D.C., 20402.

Agricultural Economic Reports

MAJOR USES OF LAND AND WATER IN THE
U.S.; WITH SPECIAL REFERENCE TO AGRICULTURE,
1964. U. S. D. A. Agr. Econ. Rep. 149,75 p.,map. Ref.
Nov. 1968. A281.9 Ag8A

This report continues the data series on major uses of land and water in the United States, with special reference to agriculture, published at 5-year intervals by the U.S. Department of Agriculture. Acreage data are obtained from many sources and articulated to form a summary account of the extent and distribution of land in each sub-category and in each major category of land use (cropland, pasture and range, forestland, and urban and other special uses) by State and regions as well as U.S. totals. Acreages irrigated and dry-farmed, acreages

drained, and other information on water-use practices related to agriculture are also shown by State region. In 1964, nearly three-fifths of the land area of the U.S. was used to produce crops and livestock, a fifth was ungrazed forest land, 8 percent was in special uses (of which a third is in urban and transportation uses and two-thirds in generally extensive public areas such as parks) and the remainder—12 percent—in desert and other land of limited surface use. Agricultural irrigation on 38 million acres in 1965 accounted for 41 percent of the nation's total water withdrawal from stream or ground sources.

Foreign Agricultural Economic Reports

- 41158 Warren, C. J.
AGRICULTURAL DEVELOPMENT AND EXPANSION IN THE NILE BASIN: PROGRAMS, PRODUCTION AND IMPLICATIONS FOR U.S. AGRICULTURE. U. S. D. A. Foreign Agr. Econ. Rep. 48,114 p.,map. Ref. Oct. 1968. A281.9 Ag8F

This report considered the increase in farm production that might be expected during the next decade in the Nile Basin. The implications of increased farm production are appraised both from the standpoint of their probable impact on local economies and the international market for farm products. Special attention is given to the affect development projects will have on the production and trade of products that compete with U.S. farm exports.

Cotton will likely continue to be the most important crop within the Nile Basin for some years to come. Indications are that a large bread grain deficit will still exist in the UAR by the time the full impact of the High Dam is realized. A realization of anticipated expansion in cotton production in the Nile Basin will have a decided impact on the world's cotton situation within the next decade. While extra long staple cotton from the area competes indirectly with U.S. cotton on the world market, short staple varieties compete directly with U.S. foreign sales. Sudanese shipments of surplus feed grains will compete with U.S. exports to Western Europe. Potential exports of oilseeds, citrus, and vegetables could also be a source of increased competition for U.S. sales abroad of these commodities.

Home and Garden Bulletins

AGRICULTURAL RESEARCH SERVICE

- 41176 Frederiksen, R. A., and others. A NEW RACE OF SPHACELOTHECA REILIANA IN SOUTH TEXAS. Plant Dis. Rep. 53(3):171-172. Mar. 1969. 1 P969P
D. T. Rosenow, L. Reyes, and L. K. Edmunds, joint authors.
Existence of a race of *Sphacelotheca reiliana* that is pathogenic to heretofore resistant *feritita* sorghum types was demonstrated by growing known genotypes on naturally infested soil of a commercial field. Natural occurrence of the new race has not been found outside Bee County, Texas. The new race is, however, considered to be potentially significant to grain sorghum production. Widespread distribution of the race would defeat popular sources of resistance to head smut of sorghum.
- 41177 Giannotti, J. TRANSMISSION OF CLOVER PHYLLODY BY A NEW LEAFHOPPER VECTOR, EUSCELIDUS VARIEGATUS. Plant Dis. Rep. 53(3):173. Ref. Mar. 1969. 1.9 P699P
- 41178 Gooding, G. V., and Lucas, G. B. TOBACCO STALK AND ROOT DESTRUCTION WITH HERBICIDES AND THEIR EFFECT ON TOBACCO MOSAIC VIRUS. Plant Dis. Rep. 53(3):174-178. Mar. 1969. 1.9 P699P
Tobacco stalk and root decay was accelerated by spraying stalks with certain herbicides in greenhouse and field tests. Dead roots contained about 1/4 as much tobacco mosaic virus (TMV) as living roots, whether killed by herbicides or by other factors. Indications are that herbicides may constitute a practical way of killing stalk and root tissue, thereby decreasing inoculum carry-over of certain tobacco pathogens in crop debris.
- 41179 Hagedorn, D. J., Wade, E. K., and Weis, G. CHEMICAL CONTROL OF BEAN BACTERIAL DISEASES IN WISCONSIN. Plant Dis. Rep. 53(3):176-181. Mar. 1969. 1.9 P699P
Chiefly *Pseudomonas phaseolicola* and *P. syringae*.
Overhead irrigated field plots on the central Wisconsin sands were utilized to study the comparative effectiveness of various copper-containing foliage spray materials for control of bean halo blight and bacterial brown spot. Several spray schedules using cupric hydroxide were also studied. Results were somewhat inconsistent, but they indicated beneficial effects of several spray materials, especially cupric hydroxide and basic copper sulfate. The most effective spray schedule was a weekly application of these materials beginning at the first trifoliate leaf stage.
- 41180 Scheifele, G. L., and Nelson, R. R. THE OCCURRENCE OF PHYLLLOSTICTA LEAF SPOT OF CORN IN PENNSYLVANIA. Plant Dis. Rep. 53(3):186-189. Mar. 1969. 1.9 P699P
During early June of 1968, severe isolated epidemics of an unusual seedling blight of corn occurred in central Pennsylvania. The causal agent of the disease was determined to be *Phyllosticta zeae* Stout.
Evaluation of 37 corn inbreds for their response to *P. zeae* under greenhouse conditions demonstrated a wide range of resistance and susceptibility. Resistance of such inbreds as WF9, A495, Pa 32, and Pa 887 p apparently was lost upon their conversion to the male sterile or the restorer inbred.

- 41181 Delgado-Sanchez, S., Fucikovsky, L., and Cadena-Hinojosa, M.
THE OCCURRENCE OF SOME PREVIOUSLY UNREPORTED DISEASES OF POTATOES IN MEXICO. Plant Dis. Rep. 53(3):189-190. Mar. 1969. 1.9 P69P
Potato diseases were observed and identified in six geographical areas in Mexico in a 2-year period. The implications of the presence or absence of the different diseases in the increased potato production in Mexico is discussed.
- 41182 Miller, P. M.
INJURY TO HETERODERA TABACUM BY HIGH SOIL TEMPERATURES. Plant Dis. Rep. 53(3):191-193. Mar. 1969. 1.9 P69P
Exposure for 6 days to soil temperatures of 32 and 37°C killed emerging larvae of *Heterodera tabacum*, preventing invasion of eggplant roots; but unhatched eggs were not killed. Exposure for 24 hours to 42 or 47°C killed unhatched eggs. Root invasion was greatly reduced if the soil was at 32 or 34°C for 3 days before transference to 22°C for further germination.
- 41183 Singh, R. P.
NATURAL INFECTION OF FENUGREEK BY TWO LEGUME VIRUSES. Plant Dis. Rep. 53(3):194-198. Ref. Mar. 1969. 1.9 P69P
In 1968, several plants of fenugreek (*Trigonella foenum-graecum*) developed two types of symptoms in New Brunswick. One type was characterized by yellow vein mosaic followed by wilting of the plants, and the other by a green mosaic consisting of dark green areas of irregular shapes and sizes on the leaves. Both types of symptoms were incited by viruses. On the basis of symptomatology, host range, physical properties, presence of intracellular inclusions, and cross protection tests, one is a strain of bean yellow mosaic virus while the second is similar to pea mosaic virus.
- 41184 El-Kandelgy, S. M., and Wilcoxson, R. D.
EFFECT OF RED CLOVER VEIN MOSAIC VIRUS ON DRY WEIGHT OF TISSUES OF GOMPHRENA GLOBOSA. Plant Dis. Rep. 53(3):198-199. Mar. 1969. 1.9 P69P
- 41185 Hearn, C. J., and Childs, J. F. L.
A SYSTEMIC FUNGICIDE EFFECTIVE AGAINST SOUR ORANGE SCAB DISEASE. Plant Dis. Rep. 53(3):203-205. Mar. 1969. 1.9 P69P
Control of sour orange scab (*Sphaceloma fawcettii* Jenkins) of citrus is often difficult and requires several spray applications. On "King" mandarin (*Citrus reticulata* hybrid), a very susceptible variety, benomyl (Fungicide 1991) reduced scab pustules by 97% on the second flush of growth occurring 90 days after application. On the third flush, 140 days later, pustules were reduced by 75%.

SUSCEPTIBILITY OF WATERMELON CULTIVARS TO WATERMELON MOSAIC VIRUS. Plant Dis. Rep. 53(3):208-209. Mar. 1969. 1.9 P69P
All watermelon cultivars tested (59) were susceptible to watermelon mosaic virus-2. WMV-2 was recovered from 40-100% of inoculated plants of each cultivar in at least one of three tests.
- 41187 Pratt, M. J.
CLOVER YELLOW VEIN VIRUS IN NORTH AMERICA. Plant Dis. Rep. 53(3):210-212. Ref. Mar. 1969. 1.9 P69P
Clover yellow vein virus (CYVV) was isolated from white clover in eastern and western Canada. The virus is similar to bean yellow mosaic virus (BYMV) in size and some host reactions but it is serologically distinct and it differs in its pattern of inclusion body formation. The possibility that CYVV has already been isolated in the United States and named BYMV is discussed.

POOR STANDS OF CORN AND REDUCTION OF ROOT GROWTH CAUSED BY FUSARIUM MONILIFORME. Plant Dis. Rep. 53(3):213-215. Mar. 1969. 1.9 P69P
Fusarium moniliforme-infected corn seedlings were collected from fields with poor stands in Mississippi. When corn seedlings were grown in axenic culture with *F. moniliforme* root growth was reduced. The fungus reduced the length of roots, and fewer branch roots developed on infected plants. After the roots failed to develop properly, chlorosis, necrosis, and blighting of the leaf blade occurred. In some cases the leaf blades died before they came out of the coleoptile sheath. A heat stable toxin was present that inhibited the development of corn roots in the same way as the live fungus. These studies indicated that a seedling blight of corn was caused by *F. moniliforme* and the mode of action of the fungus was probably by a toxin which inhibits root growth.
- 41190 Edmonds, R. L., Driver, C. H., and Russell, K. W.
BORAX AND CONTROL OF STUMP INFECTION BY FOMES ANNOSUS IN WESTERN HEMLOCK. Plant Dis. Rep. 53(3):216-219, map. Mar. 1969. 1.9 P69P
Infection by *Fomes annosus* (Fr.) Cke. in pine stumps after thinning in southeastern United States has been controlled on an operational basis by dry borax stump treatment. Tests in which dry borax was used to treat stumps of western hemlock (*Tsuga heterophylla*) in western Washington yielded results ranging from 5 to 56% infection when applied throughout the year. Varying degrees of protection were obtained from stump treatments with solutions of borax-glycerol-alcohol (0-10%) and borax-water (10%). Protection appeared to be related to the degree of borax penetration. Factors associated with penetration of borax and the need for further testing are discussed.
- 41191 Aulakh, K. S., Malhotra, S., and Grover, R. K.
PHOMA DESTRUCTIVA, ITS VARIABILITY, HOST RANGE AND VARIETAL REACTION OF TOMATOES. Plant Dis. Rep. 53(3):219-222. Mar. 1969. 1.9 P69P
Isolates of *Phoma destructiva* were grouped into three culturally distinct variants. Isolates P₁ and P₂ sporulated within 5 days, and isolate P₃ after 20 days incubation. When 41 tomato varieties were tested against the three isolates of *P. destructiva*, none was resistant to all isolates. The isolates varied in their virulence on leaves and fruits of different varieties. Only three tomato varieties were susceptible to all three isolates of the pathogen. On the basis of their cultural and pathological behavior, the isolates are characterized as distinct biological forms of *P. destructiva*. Isolates P₁ parasitized young fruits of *Datura alba*, *Withania somnifera*, *Capsicum frutescens*, and *Solanum melongena* (also the leaves) under artificial conditions.

DETECTION OF PLASMIDIOPHORA BRASSICAE RACES 2 AND 6 IN ONTARIO. Plant Dis. Rep. 53(3):223-225. Mar. 1969. 1.9 P69P
Two distinct races of *Plasmidiophora brassicae* Wor. were detected among six isolates from various cruciferous crops collected in Ontario by the reaction of standard differential varieties of cabbage and turnip. Of the six isolates, one from turnip belonged to race 2, and four from cabbage and cauliflower to race 6. The remaining isolate from cabbage-cauliflower was undetermined because of its inconsistent pathogenicity.

FIELD AND GREENHOUSE STUDIES ON THE EFFECTS OF PLANT AMENDMENTS ON RHIZOCTONIA [SOLANI] HYPOCOTYL ROT OF SNAPBEAN. Plant Dis. Rep. 53(3):227-231. Ref. Mar. 1969. 1.9 P69P
The effects of green and mature plant amendments on *Rhizoctonia hypocotyl* rot of snapbean were assessed under field and greenhouse conditions. Under both conditions, corn amendments significantly decreased hypocotyl rot. This effect persisted for almost a year under field conditions, but lasted less than 70 days in the greenhouse. Corn root growth alone also decreased hypocotyl rot under greenhouse conditions, but not so markedly as decreases obtained with whole plant amendments. Other amendments were ineffective in decreasing hypocotyl rot under greenhouse and field conditions.

A NEW NEEDLE DISEASE OF HARD PINES IN
OREGON AND CALIFORNIA. Plant Dis. Rep. 53(3):232-
234. Mar. 1969. 1.9 P69P
A new needle disease of ponderosa pine, *Pinus*
ponderosa, and knobcone pine, *Pinus attenuata*, has been
found in Oregon and California. It is caused by an undes-
cribed species of the genus *Hypodermella*, and appears to
be capable of causing severe mortality of these tree
species in plantations.
- 41196 Thyr, B. D.
ADDITIONAL SOURCES OF RESISTANCE TO
BACTERIAL CANKER OF TOMATO (CORYNEBACTERI-
UM MICHIGANENSE). Plant Dis. Rep. 53(3):234-237.
Mar. 1969. 1.9 P69P
Several new sources of resistance to bacterial
canker (*Corynebacterium michiganense* (Smith) Jensen)
exist in tomato (*Lycopersicon* sp.). Plants were grown in
the greenhouse, where they were inoculated at the begin-
ning of the three-leaf seedling stage on the wound left by
excising the first true leaf at its point of attachment.
Evaluation for resistance was made 8 weeks after inocu-
lation. The best resistance was found in *L. pimpinellifolium*
and an accession of *L. esculentum* bearing some re-
semblance to *L. pimpinellifolium*. These lines were found
to have resistance comparable to *L. hirsutum* (PI 251305),
recently reported as resistant. Vascular invasion by
the pathogen was as extensive in *L. hirsutum* (PI 251305)
as in the most resistant lines of *L. pimpinellifolium*.

NATURAL FILTERING OF SUSPENDED SOIL BY A STREAM AT LOW FLOW. U. S. Forest Serv. Res. Note PNW-88,4 p. Sept. 1968. A99.9 F7625U
During road construction, soil that is added to a stream by tractors crossing during low flow is temporarily "filtered" out before it travels far. Five-gallon samples were taken at 150, 300, 600, and 1,200 feet downstream from a road crossing, with sodium fluorescein dye used as a tracer. Suspended particle concentration was reduced from 1,055 p.p.m. at 150 feet below the road to 108 p.p.m. at 1,200 feet. The "filtering" action is a combination of settling of larger particles and dilution of sediment-laden water. This filtration is temporary and deposited soil will tend to be flushed downstream during high flows and may cause channel erosion or other damage.

BUD CHARACTERISTICS OF PONDEROSA PINE RELATED TO POTENTIAL DAMAGE BY THE EUROPEAN PINE SHOOT MOTH [BRYANCONIA BUOLIANA]. U. S. Forest Serv. Res. Note PNW-90,17 p. Sept. 1968. A99.9 F7625U
Bud characteristics of young ponderosa pine in open stands were studied as a possible basis for determining susceptibility or resistance of these stands to the European pine shoot moth. A survey of numbers and sizes of buds on branch apices showed three different bud patterns in eastern Oregon and Washington, and a fourth pattern in the Willamette Valley of Oregon. A study of resin canal development at two plots in northeastern Oregon showed that terminal buds had more and larger longitudinal resin canals than did lateral buds in the same cluster, and that elongation of resin canals occurred more rapidly in terminal buds. In July 1964, resin canal development in ponderosa pine in northeastern Oregon was much more advanced than it was on Scotch pine in the shoot moth-infested Puget Sound area. Bud number and size and probable differences in resin production between terminal and lateral buds should be tested in natural pine stands as indicators of resistance to the European pine shoot moth.

VOLUME TABLES AND EQUATIONS FOR OLD-GROWTH WESTERN HEMLOCK AND SITKA SPRUCE IN SOUTHEAST ALASKA. U. S. Forest Serv. Res. Note PNW-91,11 p. Oct. 1968. A99.9 F7625U
Field measurements collected in 1961 and 1962 from southeast Alaska logging operations were used for computing volume equations and constructing tree volume tables. Regression analysis was used for estimating three kinds of tree volume with three independent variables. Equations were produced in both weighted and unweighted forms in testing for unequal volume variances. Weighted equations and those containing form class as an independent variable were superior to unweighted equations and those not containing form class variables. Combined species equations were superior to single species equations.

A COMPUTER PROGRAM FOR SCHEDULING ALLOWABLE CUT USING EITHER AREA OR VOLUME REGULATION DURING SEQUENTIAL PLANNING PERIODS. U. S. Forest Serv. Res. Note PNW-93,9 p. Oct. 1968. A99.9 F7625U
Short Run Allowable Cut.
This Note describes a computer program, SORAC, which calculates allowable cut using either area or volume regulation at the beginning of each planning period within a rotation. This program enables the timber management planner to trace future allowable cut over time and to introduce his expectations as program inputs for every planning period. SORAC output is compared with outputs of AREA and ARVOL computer programs for a sample forest management unit.

NEEDLE MINER INFESTATIONS IN LODGEPOLE PINE [PINUS CONTORTA] EAST OF THE SIERRA CREST. U. S. Forest Serv. Res. Note PSW-177,2 p. 1968. A99.9 F7652
The lodgepole needle miner in the Inyo National Forest begins its 2-year-cycle in even-numbered years. In contrast, Coleotechnites milleri (Busck) in Yosemite National Park begins its in the odd-numbered years.
- 41284 Dunmire, D. E.
SHRINKAGE AND FOOTAGE LOSS FROM DRY-ING 4/4-INCH HARD MAPLE LUMBER. U. S. Forest Serv. Res. Paper NC-24,10 p. 1968. ASD11.A34
Acer saccharum and A. nigrum.
Equations are presented for estimating shrinkage and resulting footage losses due to drying hard maple lumber. The equations, based on board shrinkage data taken from a representative lumber sample, are chiefly intended for use with lots of hard maple lumber, such as carloads, truckloads, or kiln loads, but also can be used for estimating the average shrinkage of individual boards.

TOPOGRAPHY & SOIL RELATIONS FOR WHITE AND BLACK OAK [QUERCUS ALBA AND Q. VELUTINA] IN SOUTHERN INDIANA. U. S. Forest Serv. Res. Paper NC-25,7 p. Ref. 1968. ASD11.A34
Site quality for white and black oak in southern Indiana may be affected by such things as depth of surface soil; distance from ridge-top; slope steepness; and stone, silt, and clay content.
- 41286 Hendee, J. C., and others.
WILDERNESS USERS IN THE PACIFIC NORTHWEST: THEIR CHARACTERISTICS, VALUES, AND MANAGEMENT PREFERENCES. U. S. Forest Serv. Res. Paper PNW-61,92 p., map. Ref. 1968. A99.9 F7625Uni
W. R. Catton, L. D. Marlow, and C. F. Brockman, joint authors.
National Forests in Oregon and Washington.
Wilderness visitation typically occurs in more highly educated, small family and friendship groups who take about five 2-to 3-day trips per year. About 30 percent (400) belonged to 218 conservation groups. Those who were more wilderness purist in attitude reacted differently to some of the statements—53 on wilderness management and 22 on codes of behavior—suggested in the questionnaire.
- 41287 Williams, C. B.
JUVENILE HEIGHT GROWTH OF FOUR UPPER-SLOPE CONIFERS IN THE WASHINGTON AND NORTHERN OREGON CASCADE RANGE. U. S. Forest Serv. Res. Paper PNW-70,13 p., map. Ref. 1968. A99.9 F7625Uni
Douglas-fir generally exhibited more rapid juvenile height growth than western white pine and noble and Pacific silver fir on upper-slope clearcuts. Pacific silver fir grew slowest even though most were established prior to logging the overstory, in contrast to other species. Although height growth of Pacific silver fir increased dramatically following logging of overstory, it was exceeded by greater height growth of less shade-tolerant species.

A DROUGHT INDEX FOR FOREST FIRE CONTROL. U. S. Forest Serv. Res. Paper SE-38,32 p. Nov. 1968. A99.9 F7623U
A method is discussed whereby fire control managers in forested areas of the United States can estimate the degree of drought. A drought index based on 8 inches of available moisture is presented, and the computational procedures for computing the drought index are outlined. For purposes of illustration, drought development in five widely separated areas of the United States is depicted graphically.
An appendix develops the essential physical concepts and the general theory for a method of drought estimation that should operate throughout a wide range of climatic and rainfall conditions. A mathematical description of the overall process is included.

FOREST STATISTICS FOR THE SOUTHERN
COASTAL PLAIN OF SOUTH CAROLINA, 1968. U. S.
Forest Serv. Resour. Bull. SE-12,35 p.,map. Oct.1968.
A99.9 F7623Ub

Since 1958, area of commercial forest land in the Southern Coastal Plain of South Carolina has increased by 5 percent and now totals almost 3.3 million acres, or 63 percent of the total land area. Volume of softwood timber, which had been decreasing before 1958, has increased by 29 percent. Hardwood volume continues to increase, and at a faster rate than between the two previous surveys. In 1967, growth exceeded removals by 46 percent with over 60 percent of the excess growth in pine.

STATE AGRICULTURAL EXTENSION SERVICE PUBLICATIONS

Publications issued by the State Agricultural Extension Service are usually available from the issuing extension service, except where noted, and as long as the supply lasts. The National Agricultural Library does not distribute them.

Reproductions of material not available from the various State institutions may be ordered at regular Library rates from the United States Department of Agriculture, National Agricultural Library, Photoduplication Section, Beltsville, Md. 20705.
